# Diagnosis and Management of Benign Thyroid Lumps and Thyroid Cancers

Thyroid swellings and thyroid conditions are common clinical presentations. A lump in the thyroid could range from a simple benign pathology to autoimmune disorders to aggressive cancers. Likewise, patients can be asymptomatic or present with a variety of signs and symptoms associated with hyperthyroidism, hypothyroidism or compressive features in the neck. A sound understanding of the pathophysiology is crucial in guiding the overall management of the patient presenting with thyroid disorders. The exam-focused lecture (systematically covering history taking, investigations and principles of management) was delivered by Miss Daniela Bondin, who is a Consultant ENT Surgeon at the Tameside and Glossop Hospital in Greater Manchester and Surgical Lecturer and Tutor at Doctors Academy. She has vast experience of teaching at both undergraduate and postgraduate levels.
